

Clearview Installations & 121G Cyber Services

Cyber Services Modernization and Cloud Migration

The Challenge

Clearview Installations faced operational inefficiencies and security risks stemming from aging, unsupported server hardware that hosted critical business systems. Their IT infrastructure lacked redundancy, modern security protocols, and scalability. The company's growth and day-to-day productivity were increasingly hindered by the need for stable, modernized systems and reliable data access.

Driving Issues

Leadership recognized the business risk of continuing with outdated technology and limited cyber resilience. They sought a trusted partner to:

- Evaluate current vulnerabilities
- Develop a modernization roadmap
- Ensure long-term data security and availability

The Solution

121G's Cyber Services team performed a comprehensive assessment of Clearview's on-premise systems, followed by a strategic migration plan to Microsoft 365 and SharePoint Online. The engagement included:

Migration of email and file systems to Microsoft 365

Deployment of SharePoint for document collaboration

Implementation of cybersecurity policies aligned with Microsoft best practices

Ongoing monitoring and managed support services

This modernization provided Clearview with a scalable, secure, and easily accessible environment supporting remote and in-office work.

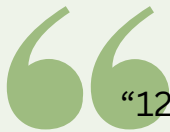

Clearview Installations & 121G Cyber Services

Cyber Services Modernization and Cloud Migration

The Results

The transformation delivered:

- ✓ Elimination of legacy hardware risks
- ✓ Enhanced data accessibility across devices and locations
- ✓ Improved cybersecurity posture, including identity protection and compliance controls
- ✓ Higher productivity through Microsoft 365's integrated collaboration tools

“121G transformed how we operate. The move to Microsoft 365 gave us stability, security, and efficiency – all while keeping our team connected.”

William Rego
President and CEO,
Clearview Installations

Technology Stack

Microsoft 365 (Exchange Online, SharePoint Online)
